

Blood Pattern Analysis Awareness for Scenes

Overview

This one-day introduction to blood pattern analysis covers a broad idea of what to expect at a scene involving the presence of blood, including the types of stains and patterns which can be observed.

Who is this Course for?

This course is ideal for those who wish to obtain a greater awareness of blood pattern analysis at scenes and how it can be used in forensic investigations.

This includes:

- Senior Investigating Officers
- Crime Scene Managers, Crime Scene / Forensic Investigators
- Scientific Support Managers / Forensic Service Managers
- Evidence Recovery Unit Scientists
- Undergraduates and Postgraduates
- Solicitors and Barristers

1 DAY
TRAINING COURSE

Course Learning Outcomes

The course will be delivered by our own highly experienced blood pattern analysis scientists, who will provide an awareness of blood pattern analysis and an understanding of its strengths and limitations in forensic investigations.

The Blood Pattern Awareness Scenes course will include the following:

Overall awareness of blood pattern analysis - including its uses and limitations

Principles and theory

Different pattern types

Blood enhancement

Blood patterns at scenes - including the different surface types and their effects on blood patterns, reconstruction and alteration post-incident

Practical exercises in blood dynamics, reconstruction and target boards

Mixture of lectures and practical

Documentation and reporting

DNA sampling

Case studies

Clare Jarman

Senior Forensic Scientist: Biology

Caroline Crawford

Senior Forensic Scientist: Biology
